

# CANCER PREVENTION STUDY-3

Research today for a cancer-free tomorrow.

What if you could prevent even one family from hearing the words “You have cancer”?

What if you could help save lives from cancer and give people more of their most precious resource: time? More time with family and friends, to help create a world with more memories, more celebrations ... and more birthdays.

This year, you can join the movement to help create a world with less cancer and more birthdays by enrolling in the American Cancer Society’s research study called the Cancer Prevention Study-3 (CPS-3).

Join the movement for less cancer and more birthdays. Enroll in CPS-3.

## Who can join the study?

The study is open to anyone in the United States and Puerto Rico who is willing to commit to the study long term, is between the ages of 30 and 65, and has never been diagnosed with cancer (not including basal or squamous cell skin cancer).

## How can you participate?

The enrollment process involves two steps. One step takes place at a local enrollment event, where you will be asked to read and sign an informed consent form, complete a brief written survey, provide some physical measurements, and give a small blood sample (similar to a doctor’s visit – 7 teaspoons total). The blood sample will be drawn by a trained, certified phlebotomist.

The other step takes place at home, where you will complete a more detailed survey. This survey will ask for information on lifestyle, behavioral, and other factors related to your health. Periodically, you will receive a survey at home to update that information.

## What else can you do?

Tell everyone you know about this historic opportunity to save lives and fight for every birthday threatened by every cancer in every community.

For more information, visit [cancer.org/cps3](http://cancer.org/cps3) or call toll free at 1-888-604-5888.

“If you have ever had a friend or family member diagnosed with cancer, one of the hardest things is feeling like we can’t do anything to help. CPS-3 is something we can do to help in the fight against this disease.”
